I’m proud to work at a company that prioritizes employees and is always looking at new initiatives to further improve our excellent safety and environmental performance, as well as increase diversity in the workplace. My job is to promote a safer and more resilient CRC that is prepared to face any emergency that occurs, but I am also one of the founding members and part of the steering committee for CRC’s Women’s Interest Network. The network works hand in hand with the company to help the women and men employed by CRC develop and strengthen their professional skills so they can reach their career goals.

— Sabrina Cisneros, HSE Advisor – Statewide Emergency Response
CRC’s premier coastal properties in the Los Angeles Basin include the Wilmington Field in Long Beach and the Huntington Beach Field.

CRC’s Long Beach operations include THUMS Long Beach Company, which operates the offshore portion of the Wilmington Field, and Tidelands Oil Production Company, which operates the onshore portion of the field.

CRC has a stake in over 80% of the properties that comprise the Wilmington Field, where we operate in collaboration with the State of California and the City of Long Beach.

CRC supports military heroes and veterans programs in partnership with USC, professional LA sports teams like the Chargers, Clippers, Dodgers and Rams, U.S. Vets, and the Fisher House for families of injured veterans receiving treatment at the Long Beach VA Medical Center. CRC also invests in Science, Technology, Engineering and Math (STEM) education for youth by being a long-time supporter of the Long Beach Unified School District Science Fair and educational programs at local Boys & Girls Clubs and YMCA’s throughout Southern California, as well as through our employee-led Magic Barrel program in science classrooms.

The THUMS Islands in Long Beach Harbor are popular features of the City’s skyline and have award-winning habitat conservation programs. CRC supports preservation efforts of the Bolsa Chica wetlands and helped launch a Bolsa Chica nature tour mobile app with information about the preserve’s natural flora and fauna. Both the THUMS Islands and the Huntington Beach Field are certified by the Wildlife Habitat Council for habitat conservation.

We thank California Resources Corporation for its commitment to environmental conservation, and dedication to inspiring youth and the community to actively participate in caring for our local wetlands and ocean resources. CRC’s investment in STEM-based education and habitat restoration helps further the goals and mission of the Bolsa Chica Conservancy, and together, we are cultivating the next generation of leaders, scientists and stewards.

— Grace Adams, Executive Director, Bolsa Chica Conservancy
